

TELPRO ROD ANODES DATA SHEET

Titanium Electrode Products Companies, "TELPRO," are manufacturers of mixed metal oxide anodes for Cathodic protection.

TELPRO Rod Anodes are manufactured using titanium, which meets ASTM B348 Grade 1 or 2 standards, which has been coated with **TELPRO** Mixed Metal Oxide coating.

TELPRO MMO coating consists of IrO₂/Ta₂O₅ and is suitable for use in all cathodic protection applications. Because mixed metal oxide anodes have an extremely low consumption rate, the titanium substrate remains constant throughout the design life of the anode.

Based upon accelerated life testing, conducted by an independent laboratory, **TELPRO MMO** coating has been proven to be equivalent or superior to other mixed metal oxide coatings which are currently being used; a copy of this test report is available upon request.

Strict quality control procedures are followed throughout the entire coating process, to guarantee proper coating adhesion and loading. Also, **TELPRO** products are tested using an X-Ray Fluorescence Spectrometer, to ensure production of the highest quality product, which is fundamental in every step of the manufacturing process.
